"The coloured states are numbered starting at zero" makes no sense because the edges have colour names, and these represent transitions.

$$(b) \quad \overline{A+B} = \overline{A} \cdot \overline{B}$$

$$A = A(B + \overline{B})$$

I'll edit/annotate in this box electronically

$$\oint V dv = 0$$

kind of makes it
a bit simple.

because I forgot something. oops.

(c)  $\oint_V \Psi_v dv = \int_0^h \int_0^d \int_0^w \Psi(x,y,z) dx dy dz$

The flowchart illustrates the marking process for a 10-question paper. It is organized into three main columns: Mark (red), Check (blue), and Moderate (green). On the far left is a vertical column of 10 boxes labeled 'Sub-total'. The 'Mark' column starts with a 'Mark' header, followed by a box containing a red 'X' and a sad face, then a box with a red 'Q' and a 'section' label, and a box with a red 'Q' and a 'number' label. The 'Check' column starts with a 'Check' header, followed by a box with a blue '?!' and a box with a blue 'Q' and a 'section' label, and a box with a blue 'Q' and a 'number' label. The 'Moderate' column starts with a 'Moderate' header, followed by a box with a green checkmark and a box with a green 'Q' and a 'section' label, and a box with a green 'Q' and a 'number' label. The flowchart includes a 'Comment/query?' box and a 'Fixed' box (with a green checkmark and a box) and a 'Not sure' box (with a green question mark and a box).
